

# ergomat

Ergomat anti-static anti-fatigue mats are individual workplace mats designed to offer excellent levels of relief to workers whose job requires them to stand up for long periods of time or who need ESD protection. Independent tests show that standing on a hard cold floor reduces circulation thus causing stiffness and fatigue in back and legs. Standing on a flexible, comfortable mat insulates the worker against the cold and encourages movement so improving circulation and reducing fatigue.

Ergomats measure 900mm x 600mm with bevelled edges on all four sides to eliminate any potential trip hazard. Mats are available in charcoal grey in two surface textures – bobbled or smooth depending on the level of anti-slip surface you require. Individual mats can be bonded together to form long runs or to fit round workbenches and machinery. ErgoMat is suited for use in dry areas and can be easily cleaned by vacuuming, sweeping or washing. It is resistant to the chemicals commonly used in industry and withstands sharp and pointed objects.

## Key Benefits

- Insulate feet from cold and vibration
- Provide good anti-static protection
- Reduction in fatigue and circulatory problems
- Provide a flexible and comfortable work surface
- Protect dropped components and tools
- Reduced level of absenteeism
- Increased levels of productivity

## Applications

- Anywhere that workers or products are affected by static electricity
- Workbenches
- Packing tables
- Assembly lines
- Counters
- Check out points

### Material

Foamed polyurethane

### Colour

Anthracite

### Weight

2.5 kg

### Length

900mm

### Width

600mm

### Thickness

15mm

### Hardness

30 – 40 Shore A
